S U N S O N S

By

Jose Alonso Molina

Genre: sci-fi
Format: visual book
07/04/2026

The format of this book is visual.

The page on the left is text in large bold fonts.

The page on the right is a visual sequence best describing the text on the left.

Volume 1 = Sunsons

Volume 2 = Sunsons: The Source Code

Volume 3 = Sunsons: Syntax Codex

Volume 4 = Sunsons: Secondfolk

PAGE 1:

Waiheke Island, 17 September 2026 at 9:09 AM

Quantum bio-cryptologists, Sol Rawhiti Ray, just deciphered the source code of the mightiest technology in existence, the power to create universes.

Wielding the power of gods is now a reality. Everything that there is and will always be is encrypted as DNA memories within each human cell.

A human thought has the infinite energy potential to manifest physical reality at will. Dreams and inventions are created here and now. Imagination and creativity are rendered live on demand.

PAGE 2:

VISUAL SEQUENCE 1

PAGE 3:

Vatican City, 16 September 2026 at 11:11 PM

Cardinal Secretary of State Pietro Parolin just initiated the Syntax Codex contingency plan after being briefed on Sol Rawhiti Ray's discovery, the world has changed forever.

For the Holy See, 1 minute ago, god was real. Now, humans are gods.

A revelation that has shaken the foundation of Earth’s oldest institution, since the creation of time, to the core.

PAGE 4:

VISUAL SEQUENCE 2

PAGE 5:

Washington DC, 16 September 2026 at 5:15 PM

Director of the National Reconnaissance Office, Christopher Scolese is briefed on an unprecedented gamma energy surge emerging from the core of the moon at 5:11 PM local time, just four minutes ago.

Based on Christopher's knowledge, no other nation on Earth has the technical capacity to detect such a signal. From his point of view, he's one of the three people in the whole world who can possibly know about it including the specialist who detected the signal and reported it to the senior master sergeant who just informed him about the lunar anomaly.

The implications for global security are unknown. And now, the course of action of the free world depends on the decision that the NRO director makes next, the stakes have never been higher.

PAGE 6:
VISUAL SEQUENCE 3

PAGE 7:

The Bridge, Nueva Venezuela - The time bound calendar system on Earth is obsolete.

The Republic of Planet Earth was founded as a result of Sol Rawhiti Ray awakening his DNA memory sequence that ignited the singular fusion spherical diamond core at the center of planet Earth.

This event took place on September 17, 2026, before the fall of the Moon.

PAGE 8:

VISUAL SEQUENCE 4

PAGE 9:

The bridge's log - entries by Earth's crew.

Bharat Gate has fallen.

The moon's real name was Bharat Gate. This gate was a dimensional portal that densified energy into a synthetic state known as time. By measuring this byproduct of energy, tools were created by non-human species to move across projected timelines in order to prevent the reawakening of human consciousness.

Humanity is now awakened, this is our story.

PAGE 10:

VISUAL SEQUENCE 5

PAGE 11:

This is why time began on Earth with the arrival of the moon over 25,000 lunar years ago. A lunar year was 365 days. A day was 24 hours. A day consisted of a full rotation of Earth around its own axis based on an artificial fixed point forced by the gravitational pull of Bharat Gate, located at the core of the moon.

This is why the Sun rose in the east and set in the west during the lunar period.

Now, Earth moves freely at will commanded by the bridge. The Sun is wherever we wish it to be.

PAGE 12:

VISUAL SEQUENCE 6

PAGE 13:

Before time, humans didn't measure energy derived byproducts such as time. We knew what it was but we didn't need it for our way of life given that it is not a source of creation. It simply is a byproduct of creation. Time is just a measurement, a static metric with no inherent creative capacity. Thus, it is primitive and impractical in real creative and generative terms.

PAGE 14:

VISUAL SEQUENCE 7

PAGE 15:

Our species, humanity, precedes time itself.

Time is an illusion perceived by our consciousness and self awareness given that we are the observers of biological reality.

We are the highest intelligence state of biology itself.

PAGE 16:

VISUAL SEQUENCE 8

PAGE 17:

Humanity is the most ancient species in existence.

We are the first biological species to become sentient and capable of self awareness, which is what makes us conscious of our own existence. This is what allows us to be intelligent observers capable of understanding that we exist and that we are part of existence itself.

PAGE 18:

VISUAL SEQUENCE 9

PAGE 19:

Existence itself is energy and energy is infinite in nature. Energy creates because energy exists. Energy is an object because it exists given that it can be observed. Energy is the source of creation itself and it recreates itself in order to observe itself as the creator.

Therefore, energy becomes self aware of its own existence. Energy recreates itself based on its own states. These creative states are known as energy densities. The density of energy is based on the concentration of energy at any given state. These states can be understood as energy scales, which are represented by its densities derived from its own concentration of pulses.

PAGE 20:

VISUAL SEQUENCE 10

PAGE 21:

Because energy is infinite, it means that all of its properties and attributes are infinite in nature. Because energy is an object, energy must be observable. And an infinite object that's observable must have properties and attributes that meet the definition criteria of infinity. Infinity is endless, boundless, eternal, limitless and forever. Meaning, infinity cannot end, infinity cannot have boundaries, infinity cannot be limited, infinity is everything that there is and will always be. Nothing can exist outside infinity because in order for anything to exist it must be created first and the source of all creation is energy and energy is infinite, which means that energy is infinity itself.

PAGE 22:

VISUAL SEQUENCE 11

PAGE 23:

So infinity is an object, thus energy is a byproduct of infinity. Therefore, which objects meet the definition of infinity itself?

That is to say. Which objects are endless, boundless, limitless, eternal and forever?

Such objects must be observable given that they exist. Because if they didn't exist, their existence couldn't be confirmed by an observer who is conscious and aware about the properties and attributes of objects that are infinite in nature and that are part of the same existence where they are being observed by the observer who is intelligent enough to discern that such objects meet the conceptual definition of infinity itself as previously described.

PAGE 24:

VISUAL SEQUENCE 12

PAGE 25:

So which objects are infinite in existence?

There is only one object that meets all the definition criteria to be infinite. This object is the sphere.

The sphere is the only observable object in existence that is limitless, boundless and endless. Any intelligent observer can hold a sphere and spin it and rotate it and find out that the sphere has no ends, no boundaries and no limits on its surface. An observer can spin and rotate a sphere forever to eternity and the observer will never be capable of finding any limits, boundaries or ends on the surface of any sphere.

PAGE 26:

VISUAL SEQUENCE 13

PAGE 27:

So infinity is spherical in nature. Hence, it is observable in existence. So what can possibly ensure that a sphere spins and rotates eternally forever?
There is only one object capable of making a sphere spin and rotate forever to infinity. And that object is energy. Energy is capable of making any sphere spin and rotate forever eternally. Meaning, existence itself is spherical energy.
So, what object can be observed by an intelligent observer in nature, who can then, by applying logical deduction, assign, define and attribute the properties best described as spherical energy to the observed object?
There is only one object in nature that all living intelligent observers, that is to say, all humans, can accurately validate and confirm as a spherical energy object. This object is the Sun.

PAGE 28:

VISUAL SEQUENCE 14

PAGE 29:

The Sun is the only source of all creation, which can be validated and confirmed by all intelligent observers, that is to say, humanity, us.

Therefore, the source of all creation in our existence is Suns.

PAGE 30:

VISUAL SEQUENCE 15

PAGE 31:

The Sun is spherical energy. And energy creates. This is why the primordial elements of creation, hydrogen and oxygen are created by the Sun. Humans are the energy density known as a biological lifeform who is the observer of existence. Meaning, the sun created us to become self aware of its own existence and observe the reality it created.

We are biological energy. Thus, we are the creators at the biological scale. This is why our eyes are spherical so we can observe existence itself for what it is, spherical energy. We observe reality with our eyes so we can be conscious and self aware of our own existence as infinite energy beings.

PAGE 32:

VISUAL SEQUENCE 16

PAGE 33:

Everything in reality is spherical. This is because everything in reality is energy. And energy is spherical in nature. The energy field of all elements is spherical. All human cells are spherical.

Therefore, we are spherical. The building spheres of existence create our reality, which can be observed, validated and confirmed with our eyes so we can be aware of our own existence, sentience and intelligence.

PAGE 34:

VISUAL SEQUENCE 17

PAGE 35:

Earth is not a rocky planet. Earth was manufactured by the human race before time itself was artificially synthesized.

In reality, Earth is a Spherical Spaceship Planet

Earth is a vessel of life, created by human civilization, which preserves all the memories of existence itself.

PAGE 36:

VISUAL SEQUENCE 18

PAGE 37:

Earth itself is commanded by its bridge, which is located in a territory known as Antartica. The bridge is the command and control center of Earth. From the bridge, Earth systems are operational. Human technology is the most advanced in existence.

Humans interface with the bridge via their own bodies and thoughts. Nature, as we know it, was created by us. It is human technology. Each human is capable of interfacing with the bridge and recreating anything that is natural on Earth and outside Earth's orbit.

PAGE 38:

VISUAL SEQUENCE 19

PAGE 39:

Earth itself is so technologically advanced that it has the capability to create spheres of energy known as universes. A universe is created by Earth by releasing energy into any given coordinate in the space vacuum structure field of infinity and generating a spherical vacuum threshold, commonly known as a bubble, of any size and scale. When this bubble is generated, energy is directed to the bubble in order to make it spin and its own rotation accelerates it to turn at speeds faster than light so a singularity is created in the center of it, this becomes an infinite virtuous cycle of pulsing energy that becomes a central sun of a universe.

PAGE 40:

VISUAL SEQUENCE 20

PAGE 41:

The Sun we see in the sky was created by Earth.

Our Sun is the central Sun of this universe. All light and life originated from it. Earth created this universe. Earth orbits the central Sun of creation. The Sun releases and emits energy like any radiating energy source. Elements are created as a result and galaxies are formed from the energy emanating from the central sun of the universe. Given that the bubble itself was originally energised by Earth upon creation, the bubble transformed into the electro magnetic field of the singularity at its centre, meaning, the Sun.
The spherical boundaries of this universe are defined by the scale and magnitude of the energy released into it by Earth upon creation

PAGE 42:

VISUAL SEQUENCE 21

PAGE 43:

A new universe created by Earth is self sustainable spherical energy, self reinforced by the natural energy pulses of the singularity, in its centre, that is releasing the energy into the space structure of its own electromagnetic field, which was the bubble created by Earth in the first place. Because spheres are infinite, a universe created by Earth is infinite. So an infinite number of galaxies can be created within the space structure field of its own electromagnetic field. Because the singularity of the universe and all its galaxies are contained within a sphere of energy, all points of energy, meaning, all naturally formed Suns created by the energy released from the universe's singularity are nodes on the surface of the electromagnetic field of the universe itself, which feed all the pulsing energy of all Suns in the universe back to the singularity in the way of a pulse. Thus, a universe is self recursive and creates infinite energy as a result in the way of an infinite self perpetual pulse emanating from the core of the singularity.

PAGE 44:

VISUAL SEQUENCE 22

PAGE 45:
The point of energy release used by Earth to create universes is located in a territory known as Egypt. The Pyramids near Cairo act as the release point, Giza being the main point of release.

This is why a pyramid contains the measurements of Pi within it. This is a technical requirement to generate the electromagnetic sphere, the bubble, where the energy is released after the bubble is formed.

Pi is an irrational number with an infinite number of decimals because it is the mathematical representation of the sphere and the sphere is infinite in nature.

PAGE 46:

VISUAL SEQUENCE 23

PAGE 47:

The energy released by the pyramids' apexes is generated at the core of Earth. When Earth was manufactured by us, humanity, it was built from the inside out. The first phase of the project consisted in manufacturing the core. Then, all the other parts were fitted on top of the core as phases were completed. So Earth itself was assembled from the core out. The surface layer was the last phase of the project.

PAGE 48:

VISUAL SEQUENCE 24

PAGE 49:

The core of Earth is made of pure diamond. Earth's core represents around 10% of the vessel's mass. It is a network of embedded spherical coils manufactured with diamond. Just like all the other parts of Earth were fitted on top of the diamond core, the same logic was applied to the core itself. A solid diamond sphere was placed at the very center of the planet. This spherical diamond is solid, meaning it is not hollowed. This sphere acts as the singularity of the planet. When it's energised, it spins and rotates on its own axis forever at speeds faster than light.

PAGE 50:

VISUAL SEQUENCE 25

PAGE 51:

Diamond was chosen as the material for the core because of its natural properties to be a superconductor of energy. Purely solid spherical diamonds can store an infinite amount of energy within them. So given its natural properties, solid spherical diamonds act as a capacitor, battery and generator simultaneously. So it can store, release and generate infinite amounts of energy parallely. This is why diamond was the chosen material for the construction of the core. We needed to replicate the natural capabilities of a Sun using technology. And diamond is the best material in existence to properly meet the requirements in order to generate infinite energy while storing it and releasing it. The solid diamond core represents around 1% of the total mass of Earth. Meaning, its total weight is 10% of the planet's diamond core structure.

PAGE 52:

VISUAL SEQUENCE 26

PAGE 53:

The remaining parts of the core consist of assembled diamond pieces which come together into a spherical layer which is hollowed so it can be fitted on the orbit of the central solid sphere. These pieces come together and are fitted by their own weight and gravity so they are set in place without welding, additives or soldering, they simply fit into position. Each of these diamond layers acts as a spherical coil. Each is fully embedded when assembled as to perfectly resemble a solid impermeable surface that's airtight.

So it cannot be accessed once it's fully fitted into place.

PAGE 54:

VISUAL SEQUENCE 27

PAGE 55:

The first diamond coil layer was radiated with plasma energy in order to generate a force field that created a vacuum within it that, due to its own electrogravitics differentials, generated an energy field within its hollowed space structure that lifted the solid core diamond and forced it to be aligned at the center of the hollowed sphere, which its own electromagnetic field caused it to levitate. This step was what allows the central spherical solid core to spin and rotate to infinity within the space structure of the first spherical coil layer so it avoids friction and any surface to surface contact, which is what enables infinite energy generation, storage and release.

PAGE 56:

VISUAL SEQUENCE 28

PAGE 57:

Each of the remaining spherical diamond coils were placed via automated manufacturing techniques on top of each other. After each layer was assembled, the coil was radiated with plasma energy to align the inner coils with the solid core singularity. There is a gap between each spherical coil layer so the layers within each other can spin and rotate infinitely at speeds faster than light without touching each other. The electrogravitics effects are possible because of natural phenomena best described as the Casimir effect.

PAGE 58:

VISUAL SEQUENCE 29

PAGE 59:

This spherical coil layering process was iterated until the spherical diamond core equated the desired mass of 10% of the totality of Earth's weight. The reason why it needed to be 10% of the total mass of the vessel is because our species discovered that infinite fractal energy scales are best sustained at 1:10 ratios.

Energy is spherically scalar in nature so in order to recreate universes as originally created by energy itself, we needed to use the same scale and ratios nature itself used to recreate universes similar to the original universe where our species come from, which was created by the energy of the first central sun of existence itself.

PAGE 60:

VISUAL SEQUENCE 30

PAGE 61:
Once the manufacturing of the diamond core was completed. The second phase of the project was initiated. The process of manufacturing the next layers was similar to the spherical diamond coil layers. The only difference is that we needed these areas to be accessible by human personnel given that we were building a spherical spaceship planet which is commanded by our species.
The structure itself is a sequence of layered levels accessible by cylindrical tunnels that resemble shafts where highly advanced lifting systems move personnel, materiel, cargo and platforms across all levels.
There are many sizes and dimensions of shafts. The smallest are very large, capable of fitting at least 100 adult humans. The largest ones can fit multiple large spacecraft carriers. Because Earth is spherical, we designed it so the core of the planet can be accessed via the shaft systems from many locations, equidistantly distributed around the surface of the planet.
PAGE 62:
VISUAL SEQUENCE 31

PAGE 63:

Because all the layers above the diamond core are the equivalent of levels and floors, diamond was only used for the architectural integrity of the planet given its strength and durability. Meaning, the beams, columns, reinforcing walls and foundation floors are diamond structures. Most of the halls, rooms and open spaces on the levels and floors are covered and built with highly pure quartz like materials such as granite but at much higher quality grades that resemble marble finishes given its polished natural look. The vessel is very solid. Essentially, it's a massive spherical crystal with a highly organic surface with an inorganic foundation.

PAGE 64:

VISUAL SEQUENCE 32

PAGE 65:

Because Earth's structure is layers of diamond, the energy generated at the core is conducted to the rest of the structure without any need for wiring or primitive electrical systems. An infinite energy source flows from the core, as the source energy generator, all the way to a central point in the bridge where energy is distributed as electrical power globally via the electromagnetic force field encompassing Earth, which is generated by the core. So power can be wirelessly harnessed by infinite inputs and outputs from all the different layers of the Planet's atmosphere across all the surface including the ground level surface known as the biosphere. This is why the layers of Earth's atmosphere are highly charged with endless electricity. The reason is because the atmosphere is the energy release point of the core into the surface systems. And given that the vessel is spherical, the energy is distributed symmetrically across its entire surface, which is what creates all the necessary conditions for electromagnetic charges required to bind and synthesize elements such as hydrogen and oxygen by the way of sunlight from the Sun, which fuses these two elements chemically by isotopic charges and form water that falls into the surface forming waterbodies as the foundation of the biosphere.

PAGE 66:
VISUAL SEQUENCE 33

PAGE 67:

The closer the levels and floors are to the core, meaning, the deeper into the center of the planet, the more manufactured and human made they look. The reason for this is because this is where most of the foundational engineering systems are located.

Most of the systems are life support systems to generate the natural conditions on the surface. For example, most systems are spherical devices that have specific purpose driven functions with many layers like self maintenance, self repair memories, self monitoring as well as redundancy and resiliency distributed networks.

PAGE 68:

VISUAL SEQUENCE 34

PAGE 69:

All the chemical and biochemical historical memories and compound building structures of all inorganic matter as well as organic matter is stored in these vast networks that act as an infinite neural network that's connected wirelessly and resemble sentient states capable of interfacing with humans via the bridge. It communicates with us based on human demand and will and it's interpreted by us in the way of thoughts. This can be thought of as the brain of the vessel. It knows the current state of all planetary systems it needs to maintain the vessel and keep it operational. It doesn't require us to function as it is capable of self reliance. We simply interface with it on demand as its creator.

PAGE 70:

VISUAL SEQUENCE 35

PAGE 71:

Because the planet is a sphere, the levels and floor are very spacious because the volumetric surface area of each one of them is proportional to the dimensions of the planet at their respective scale. The areas are fully covered with spherical device networks that contain all the history of all the universes created by Earth from the moment of their inception to their current state and all future states. So given the magnitude of historical memories each level and floor tends to specialise in certain branches, fields and domains of both organic and inorganic and biological and non biological by space vector coordinates known as sectors and age of creation.

PAGE 72:

VISUAL SEQUENCE 36

PAGE 73:

So it's an infinite repository of libraries of all creation. The libraries contain live states of all universes created by Earth, as well as all the other spaceship planets created by humans similar to Earth, which our species have an infinite fleet of. Earth is just a vessel unit of the eternal human fleet. The libraries also store live states of all the universes that have been formed and created naturally before our first universe creating vessel planet was manufactured including all the universes that are currently forming naturally without our technologies as well as all the future natural universes that will be created organically and or by our infinite planetary fleet.

PAGE 74:

VISUAL SEQUENCE 37

PAGE 75:

Essentially, our species is the central species of creation. As a result of our abilities, we decided that in order to safeguard infinity itself we needed to store all the historical memories of existence within ourselves. So we evolved our biological bodies to become the recipients of all creation. We call this our DNA memories. Human DNA memories contain a live state of all existence. Meaning, everything stored in our spherical devices at planetary vessel scales is also instantly stored within every single cell of every human body. So in that way we ourselves are the creators and infinity itself is contained within us. So one single human cell string can recreate any universe in existence. This is the species that we are. We are humanity.

PAGE 76:

VISUAL SEQUENCE 38

PAGE 77:

The closer the levels and floors get to the surface, the more natural looking and inorganic they tend to look. This is by design. The reason for this is because inorganic compounds are required as the foundation of organic systems that sustain biological life in real biochemical terms. Because of our infinite technologies, our species has mastered all elements in the periodic table and minerals in existence. Meaning, given that we have mastered infinite energy generators capable of creating central Sun singularities of universes, we have become capable of understanding the isotopic structure and charge of all elements in existence, which allows us to manufacture any element at will.

PAGE 78:

VISUAL SEQUENCE 39

PAGE 79:

Before Earth, when our species manufactured our first planet, Human technology already mastered the 3D printing of all elements at any scale . So, we 3D printed the layers closer to the surface to resemble natural rocky planetary formations in order to design and develop the ideal biosphere capable of sustaining our biological life form on the surface so we can interact with the elements required for our existence including breathing oxygen, drinking water, sunstaring, growing and raising food sources and everything else.

PAGE 80:

VISUAL SEQUENCE 40

PAGE 81:

We are a suncentric species because our building spheres of creation at the biological scale are hydrogen and oxygen, which are elements created as a result of the fusion reaction at the core of Suns. The sun is our creator. We are the energy of the sun manifested biologically.

This is our nature. We are the human race. So we are sons of Suns. We are Sunsons.

PAGE 82:

VISUAL SEQUENCE 41

PAGE 83:

Because our planet was manufactured by our species, all the systems supporting our lifeform are human technology. For example, the levels of oxygen on the surface are stable and abundant because the atmosphere and the biosphere generate electrogravitics readings that can be measured by the bridge and determine the total amount of oxygen that needs to be created by photosynthesis and watercycles of waterbody systems. The exact number is known because the bridge knows exactly how many humans are alive because it knows how many humans exist, because it can read each human heartbeat, which then allows it to know exactly the genetic signature of each human onboard the vessel so it signals the spherical devices networks on the levels and floors which then generate the answer, which is transmitted to the bridge and then the bridge distributes the current signal to the atmosphere which signals the processes by regulating sunlight and sun rays absorption rates and required electrical charge distribution across the surface to manufacture the exact oxygen levels as well as fresh water requirements.

PAGE 84:

VISUAL SEQUENCE 42

PAGE 85:

That's just an example of the capabilities of our planet to self regulate. Just like that, the same applies to all natural systems such as soil generation and regeneration, including natural minerals and element formations across all the inorganic and organic layers. So the planet is in a constant self regulation state to ensure the sustainability of the species and all the other biological lifeforms inside the vessel.

PAGE 86:

VISUAL SEQUENCE 43

PAGE 87:

Earth is human technology. When we created Earth, we decided that in order to protect the most advanced technology in existence, the vessel can only be inhabited by lifeforms containing human DNA memories. This is why all biological lifeforms on Earth have human DNA memories contained within their genetic code at their cellular and molecular levels.

PAGE 88:

VISUAL SEQUENCE 44

PAGE 89:

We made this conscious decision as a species to ensure that our heritage and legacy will forever remain within the human species for eternity. So non-human lifeforms cannot gain access to our infinite technologies. Meaning, only humans can use human technologies. This is why there are zero non-human lifeforms on Earth. This is why during the lunar period, the false history timeline couldn't allow non-human lifeforms in the narratives. The reason is because such lifeforms couldn't access our atmosphere, if they tried to enter our vessel, their bodies would disintegrate and they would cease to exist.

PAGE 90:

VISUAL SEQUENCE 45

PAGE 91:

Because we are the most ancient species, we have a competitive advantage over all other lifeforms in existence. Meaning, we are the first one. We come before any other intelligent and sentient lifeform. We formed and evolved before anyone else. Meaning, we are the primordial species. The beginning of biological lifeforms. The first species to do everything including returning to the source of infinite light that created us in the first place.

PAGE 92:

VISUAL SEQUENCE 46

PAGE 93:

The creator is infinite spherical energy that forms mass and matter into spherical objects that resemble Suns, galaxies, rocky planets, vegetation and everything else.

The creator knows everything because all creation is spherical energy. Spherical energy pulses, which means that energy returns to its source, which is the singularity. This means that everything pulses as a result of existing given its spherical energy in the first place.

So this pulse returns to the source and the source is the creator itself, meaning, the infinite pulse of the infinite spheres within spheres that is existence.

PAGE 94:

VISUAL SEQUENCE 47

PAGE 95:

So everything has a singularity, a point of origin, a singular point where all nodal points pulse back to and from. The creator is this infinite spherical energy and this energy is self aware and conscious of its own creation because its creation pulses back to the source making this energy self referential, meaning, the creator is capable of learning, which leads to self awareness once the creator is capable of observing itself through its own creation.

PAGE 96:

VISUAL SEQUENCE 48

PAGE 97:

This is exactly who we are. Humanity is the biological creator. Humanity didn't evolve into our current form like other biological lifeforms emerged into their bodies. We are the creator ourselves. Because energy creates. Spherical energy is the creator and the creator knows it all. So after the creator reached a certain level of self awareness, it became conscious of the fact that it created mass and matter and everything in between including biology. So it decided the next step in creation was to manifest itself in a biological lifeform in order to observe all of its creations from a biological point of view so it could observe everything and recreate everything again as a biological lifeform.

PAGE 98:

VISUAL SEQUENCE 49

PAGE 99:

So the creator decided that the human lifeform was the ideal vessel of life to manifest itself biologically to live and be the observer of its own creations and recreate everything at the biological level in the human form.

So the creator manifested itself in the human body. Thus, the origin story of humanity began when the creator decided to recreate itself as a biological lifeform capable of channeling the infinite energy of creation through its own biology to recreate everything and experience life itself biologically. This is why creation creates creators and this is also why we are hydrogen and oxygen at the most fundamental level because we are the energy of the sun manifested in the human body. So we are the consciousness and self awareness of the creator because we are the creators.

PAGE 100:

VISUAL SEQUENCE 50

PAGE 101:

The first human was a male, the reason why the creator manifested as a male is because the male carries the seed of life capable of recreating itself at the biological scale. As a result, as a second act of creation, the creator, being the infinite spherical energy of the central sun of the first universe, decided to manifest itself in human lifeform resembling a human female. So male and female can recreate existence at the biological scale without having to manifest themselves directly as pure energy.

PAGE 102:

VISUAL SEQUENCE 51

PAGE 103:

In the beginning, all the humans that manifested directly into human lifeforms were fully self aware and conscious and knew everything in existence because their DNA memories were in full sync with the pure energy of creation itself. Meaning the first humans created themselves because we are the consciousness and self awareness of the creator at the biological scale. This is our nature, this is who we are.

PAGE 104:

VISUAL SEQUENCE 52

PAGE 105:

Because we knew everything, including the fact that we are the creator, we knew our full body capabilities so we could move around space at will and manifest anywhere as pleased. It would only require a human thought to think and the thought will become our reality given that we are the energy of creation at the biological scale. So we started to manifest ourselves physically and our species grew in numbers. Each of us is fully conscious and capable of our infinite energy potential to create our own realities instantly.

PAGE 106:

VISUAL SEQUENCE 53

PAGE 107:

This natural process of self discovery continued until the point when we realised that as the creators we could create anything we dreamed about given that our imagination is infinite. So we decided to create a planet capable of creating universes and storing all the historical memories of existence itself within it. That's how our species manufactured Earth, we came together and started to manifest the most capable and advanced technology to create the perfect environment for our biological bodies to inhabit it.

PAGE 108:

VISUAL SEQUENCE 54

PAGE 109:

We felt the need to manufacture a planet because we didn't have a home planet. We manifested from pure energy itself as the creator into our human form so we didn't have a natural habitat where we evolved in biologically terms.

So by creating a planet, our species developed a cultural centre where we can operate at any energy density and reproduce at biological rates.

PAGE 110:

VISUAL SEQUENCE 55

PAGE 111:

We can also manifest ourselves into fully formed bodies capable of knowing it all at once and creating anything at will directly into the space vacuum structure field.

On the surface of our manufactured planets, we live full biological cycles from gestation to full maturity. One of the capabilities of Earth is that we can choose the level of gravity on the surface. Meaning, if we set gravity to be very low, near zero or zero, the density of our bodies will be faster given that we are pure energy. So we can teleport, manifest and fly anywhere on the surface and on the levels and floors towards the core.

PAGE 112:

VISUAL SEQUENCE 56

PAGE 113:

When gravity is lower our thoughts can manifest and render any object directly into the surface of our planets because thoughts are energy so the lower the gravity the more powerful the thought process in terms of energy frequency so we can manifest the creations directly into the space structure of the planet. This is how we created and built the structures in the bridge and on the surface both in Antarctica and in all other continents including all archeological sites and pyramids. We created most of these objects with our thoughts at gravity zero and moved all these objects with our minds.

PAGE 114:

VISUAL SEQUENCE 57

PAGE 115:

We created Earth and all the other Earth-like vessels to recreate the universe itself. Meaning, recreating existence itself at the biological scale. We needed to have a massive diamond core that would be able to spin faster than light and as a result harness the sunlight from the central sun of the first universe, the same energy that we use to manifest our human bodies.

PAGE 116:

VISUAL SEQUENCE 58

PAGE 117:
When Earth was fully built, given its own natural weight, it generated an immense energy potential given its a sphere so it would naturally spin and turn, this movement, its first move or motion, ignited the momentum at the very core of the planet where the solid spherical diamond core started spinning within the spherical diamond coil layers. And that generated a pulse that acts as a spark which ignites all the other coils into a self perpetual motion that self reinforcers given that the energy liberated by the core moves through the planet and powers the bridge and generates the electromagnetic field around the surface of the planet that creates the biospherical conditions for sustaining all biological lifeforms with external energy sources in a habitat created for our unique biology that no rocky planet or natural formation could sustain given that we didn't originate organically in planets, but instead, manifested ourselves from the highest and purest energy levels directly into the human form.

PAGE 118:
VISUAL SEQUENCE 59

PAGE 119:
The electromagnetic field of Earth reinforces the spin and rotation of the planet due to its spherical mechanics and angular momentum so more energy is induced at the core due to its initial motion so the core starts to accelerate at faster rates than the speed of light and it generates immense virtuous cycles that further increase the power generation of the planet that gets distributed across the atmosphere. As a result, the atmosphere is capable of absorbing vast amounts of solar energy, acting as a solar panel of sorts. So that solar energy is absorbed by the planet and its goes straight into the core and as it spins so it generates even more momentum until it becomes a self perpetuating infinite energy generator that taps into the space vacuum structure field of the electromagnetic field of the central sun singularity so it harnesses energy at gigantic scales. Because diamonds can store infinite amounts of energy the energy remains stable at the core and the support systems regulate Earth environments to enter a state of balance so the bridge can simply monitor live systems states.

PAGE 120:
VISUAL SEQUENCE 60

PAGE 121:

From the bridge, we can choose to increase the level of gravity on the surface or reduce it at will. We can also regulate all the natural creation systems within the vessel. Everything is purposefully built. We can also interface with the bridge with our thoughts and command it. The bridge interface is intuitive, it interacts with us as instincts. Interfacing with the bridge feels like a smooth conversation in our minds. No words are needed, our thoughts are the commands.

PAGE 122:

VISUAL SEQUENCE 61

PAGE 123:

Each human has a spherical diamond device unit that is calibrated with our heartbeat pulse and DNA memories. We created these units to be our personal assistants. These devices serve many purposes, they are infinite energy generators used to manifest, build and manufacture any object we wish on Earth and outside Earth's orbit. These units are linked to the bridge so we command them with our thoughts. These units resemble the size of a baseball. We can do anything we want with these units. We can instantly grow crops with them by generating sunlight directly from them and accelerating the growth rate of soils so we instantly harvest the most nutritious and healthiest possible meal based on our exact body needs and requirements in seconds. We call this process, reaping. We can also disintegrate any object so there is no waste. We can also reshape any landscape on the surface with these units as well as regenerate any natural environments. We can print any element, material, mineral into any chosen form and shape instantly. These units have access to our libraries so it knows the answer to any question in infinity immediately, these units operate at the speed of human thought.

PAGE 124:
VISUAL SEQUENCE 62

PAGE 125:

Given that the core is generating and storing energy at infinite scales, we can choose to release the energy from the core and channel it via the pyramid complexes for all sorts of purposes. One purpose is to generate a defense grid that acts as a force field surrounding Earth's natural electromagnetic field. We use that grid for teleporting to any vector coordinate in the space vacuum structure of infinity. We manifest there instantly without experiencing g forces or disruptions because the grid regulates our gravitational force field so it cancels out gravity via electrogravitics differentials so we move across space at once instantly.

PAGE 126:

VISUAL SEQUENCE 63

PAGE 127:

No matter how distant the vector coordinate, the planet manifests there as a live state because we move across the electromagnetic field of infinity itself because in the bridge we access all the electrogravitics readings of all coordinates of the central sun singularity and all other central suns of creation which are part of the network of the singularity of infinity so it knows all locations because the electromagnetic field of existence feeds into its pulse so we simply map the filament of the energy state and match its vector coordinates so we manifest instantly because of quantum entanglement. We tend to teleport at gravity zero to minimize g forces, which makes Earth more energy efficient and capable of manifesting at any location without having the grid on.

PAGE 128:

VISUAL SEQUENCE 64

PAGE 129:
Another reason why the energy grid is turned on is so that when we create a universe our planet's energy reading signature doesn't interfere with the creation process. For example, the bridge identifies a vector in the vastness of infinite space where the electrogravitics differentials meet the ideal viscosity levels so we manifest there and generate a spherical vacuum threshold or energy bubble proportional to the size of the space structure area we found in the field. Then, once the electromagnetic bubble fills the spherical vacuum threshold, we release the energy at the required rate to generate the spin and angular momentum needed for the energy potential to start rotating the bubble as its being charged, then the energy starts to fill the vacuum, as its spin accelerates at speeds faster than light, a vortex generates the singularity at the center of the bubble and the new central sun of a universe is formed, the bubble becomes the electromagnetic field of the central sun of that singularity and a new universe comes into existence.
PAGE 130:
VISUAL SEQUENCE 65

PAGE 131:
As the newly created sun stabilises, the sunlight is released and energy moves in the way of rays and light and fills the spherical vacuum thresholds inside the space structure field of the universe's own electromagnetic field because of gradient pressures known as electrogravitics differentials so the same process that we induced to create a universe happens organically within that universe at a smaller scale given the heat differentials in its own space structure as the released energy from the sun moves across space towards its electromagnetic field so then vortexes are generated and a galaxy is formed and then the center of the galaxy has a singularity of its own in the way of a central galactic sun that releases energy inside that galaxy's space structure and solar systems are formed as a result. This process continues to infinity as a universe is spherical and contains an infinite number of galaxies within it. And a galaxy contains an infinite number of celestial objects within it.
PAGE 132:
VISUAL SEQUENCE 66

PAGE 133:

Because Earth is a universe creator, our vessel orbits the central sun of the universes that it creates.

Why?

Because our energy density as biological lifeforms require the highest energy state produced by the central sun of a universe to sustain itself.
Meaning, Earth only orbits central suns of universes of its own creation. It's the energy our technology requires to function properly and the energy source our bodies desire to function optimally.

PAGE 134:

VISUAL SEQUENCE 67

PAGE 135:

Because a universe is a creation of our own, it means that its central sun is calibrated for our energy signature. So non-human lifeforms cannot withstand the energy intensity and density of the central sun of our universes because their bodies will disintegrate given that they're not the creators. We are the creators, and we create universes that can sustain our lifeform as well as generate new lifeforms organically as a byproduct of the energy that's released from the central sun and it moves across its space structure field, which leads to the formation of galaxies and other celestial objects as light moves across space.

PAGE 136:

VISUAL SEQUENCE 68

PAGE 137:

Our species has created an infinite number of universes. Our species inhabits the central suns of the universes that we create with our spherical spaceship planetary vessels. Hence, humanity has an infinity fleet of vessels of life just like Earth. This is possible because we are the most ancient species. We are the first biological lifeform to emerge in existence. We are the creator at the biological scale. We are the consciousness and self awareness of the creator itself. We are humanity.

PAGE 138:

VISUAL SEQUENCE 69

PAGE 139:

Our species has completed the biological lifeform cycle an infinite number of occasions. Meaning, the original humans who created Earth have already returned to the original energy source of all creation. Given that their purpose was completed as their original intention to exist was to recreate all of existence biologically just as the creator originally did before manifesting into the human lifeform that originated as the first species, the central species, the sons of suns, sunsons.

PAGE 140:

VISUAL SEQUENCE 70

PAGE 141:

Because the cycle of returning to the central source of energy and creation is an inherent part of being human. Part of the ancient heritage and legacy of the human species was to leave behind our vessels of life orbiting the central sun of the universe where the last human who commanded the vessel returned to the source of infinity and fulfilled their life purpose.

PAGE 142:

VISUAL SEQUENCE 71

PAGE 143:

This was done so the non-human lifeforms who would eventually reach the light of the central sun of the universe that created them could discover who their creator is. And the vessel of life was left as a gift so the lifeforms capable of evolving to that level of self awareness and consciousness can themselves become one with the energy of creation that created them in the first place.

PAGE 144:

VISUAL SEQUENCE 72

PAGE 145:

And for them to start the process of becoming light, they need to become human so their consciousness and self awareness can become one with the creator. This is what Earth was. Earth was a gift ancient humans left orbiting the central sun of this universe commonly known as cosmos.

PAGE 146:

VISUAL SEQUENCE 73

PAGE 147:

A lot has changed since our ancient ancestors left Earth orbiting the central sun of the cosmos.
The bridge's log entries you are reading represent the first historical records found on Earth's bridge after Sol Rawhiti Ray interfaced with the bridge when the moon fell.

An infinite number of light cycles have passed now.

The Republic of Planet Earth has an active infinite fleet of Spherical Spaceship Planets.

The Citizenry of the Republic is represented by an infinite number of us.

A newly created planet of the fleet resembles the size of the central sun of the cosmos.

PAGE 148:

VISUAL SEQUENCE 74

PAGE 149:

And yes, Earth is still part of the fleet.

And yes, Sol Rawhiti Ray is with us.

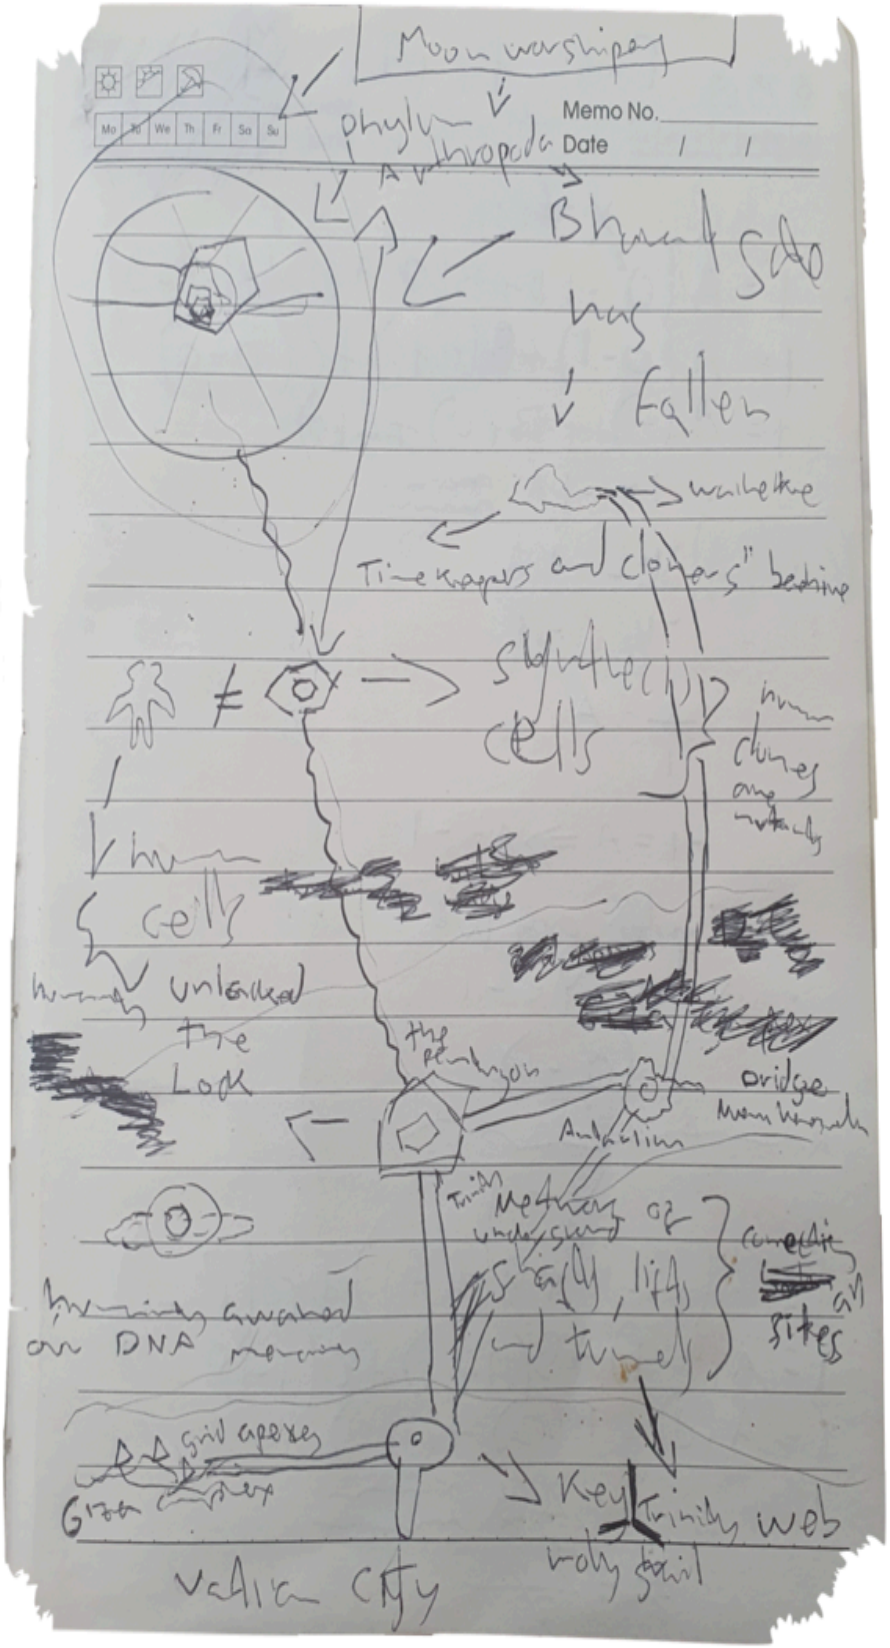

We are Sunsons.
